

LIMÓN[®]

Fresh thinking for production and energy

Climate-active company

This company recognizes the principle *optimization before substitution before compensation* and is currently putting it into practice. In the course of the consulting project with Limón, the Scope 1 and 2 carbon emissions according to the GHG protocol were determined to be 1313 tons for the year 2019.

KURO Kunststoffe GmbH
Industriestraße 45
26188 Edewecht

In a targeted manner, these emissions should be lowered with efficiency measures and the expansion of on-site power generation. For the years 2021 and 2022, remaining emissions in the forecast were offset by purchasing high-quality CDM Gold Standard Climate Protection Projects.
